## Description

*Stationary Machines: Safety First!* is an educational guide that makes workshop safety a matter of priority and vigilance among students of cabinetmaking. This book provides students with fundamental safety training and raises their awareness, right from the beginning of their education, about the rules and regulations, and the dos and don'ts of each stationary machine.

Illustrations of more than a dozen stationary machines (radial saw, jointer, shaper, etc.) indicate recommended practices and what to avoid. The accompanying texts reinforce the visual message with clear explanations that serve to minimize the risk of injury for users of these machines.

Summary: General Rules ▪ Dress Standards ▪ Workshop Behaviour ▪ Stationary Machines ▪ Layout of the Machines in the Workshop ▪ Emergency Procedures

French version also available: *Machine-outils fixes - La sécurité d'abord!*
